

ABSTRACT

A grill rack cleaning device is disclosed for efficiently cleaning grill racks having parallel metal rods. The cleaning device comprises a rigid main body and plurality of substantially cylindrical clip members. The clip members are spaced apart from each other in transverse direction; and are secured to said main body in a parallel manner with respect to the longitudinal direction. The clip member comprises a thin, elastically deflectable and substantially cylindrical wall member which surrounds a substantially cylindrical hollow interior, and has an opening along the longitudinal direction. The clip members are sized such that the circular cross section of the hollow interior is approximately the same as the circular cross section of the metal rods in a grill rack to be cleaned.
